@WEREWOLF-DEMON Yes 😊 You can speed up your Node.js workflow by caching npm dependencies with the built-in `actions/cache`. Here's an example:

```
- uses: actions/cache@v3
  with:
    path: ~/.npm
    key: ${{ runner.os }}-node-${{ hashFiles('**/package-lock.json') }}
    restore-keys: |
      ${{ runner.os }}-node-
```

This caches the npm folder based on your `package-lock.json`. When the lockfile changes, the cache updates.

Alternatively, if you're using `npm ci`, this works well with cache too. It can cut install time a lot.
